

## MULTI MANOMETER

*Non contractual photo*

**SERVICE :**

### REFERENCE : SERIE EI 100

The multimanometers are entirely made of altuglas and are equipped with quick couplings ensuring a great ease of connection and a very good sealing. The scale graduated at intervals of 2 mm is made by photographic method on transparent support and can not be altered. Multimanometers can be used with several manometric liquids: mercury, water, etc ... with the exception of liquids that may attack altuglas. The leveling is done by calving screws.

#### Available models

- Fixed model

EI 100 : 24 tubes, fixed tank, 500 mm scale Single tubes or U-tubes

- Reclining tank models : mobile
